

Building a Landstar logistics center in 52 seconds

Fleet Owner Staff | | May 31, 2017

In less than a minute, you can watch the new 31,000 sq. ft. Landstar U.S./Mexico Logistics Service Center in Laredo, TX, come to life; a construction project that lasted from May 2016 to February 2017. The facility features a 30-bay cross-dock and custom 120-ton stand-alone bridge crane. Located on a massive 50-acre site, the new expanded logistics center is one of the largest facilities of its kind in Laredo, according to its design-build firm, Haskell.
